February 19, 2024 – Form accessibility improvements

2024 · https://www.primaryrecord.com/docs/february-19-2024-form-accessibility-improvements/

- General
  - The background color of form inputs was improved to support accessibility and usability. The added contrast allows users to scan and read the form more easily.
- Medical Profile
  - The clickable area to select a profile item while bulk editing is increased to the entire card. This helps users who were having difficulty selecting the checkbox target.
  - The visits section of the summary report showed gaps or blanks between records, breaking the report's readability. The document template was updated and addressed the issues that were known. We will continue to narrow down and resolve other issues that might come up with customer data in the reports as we see them.
