Supported Document Formats for Profile Files

Resources & Reference · https://www.primaryrecord.com/docs/supported-document-formats-for-profile-files/

When files are uploaded to the Primary Record, they undergo processing of text and images, making them accessible for search functions and the chat assistant.

Document & Text Formats

- ABW: AbiWord document format, used for word processing documents.
- AZW: Amazon Word format, used for eBooks on Kindle devices.
- CBR: Comic Book RAR archive, used for comic book files.
- CHM: Compiled HTML Help file, used for software documentation.
- CSV: Comma-Separated Values, used for tabular data in plain text.
- DOC: Microsoft Word document, used for text documents.
- DOCM: Microsoft Word Macro-Enabled Document, used for Word documents with macros.
- DOCX: Microsoft Word Open XML Document, used for modern Word documents.
- DOTX: Microsoft Word Template, used for creating standardized documents.
- EPUB: Electronic Publication, used for eBooks.
- HTML: HyperText Markup Language, used for creating web pages.
- KEY: Apple Keynote presentation file, used for slideshows and presentations.
- LWP: Lotus Word Pro document, used in IBM Lotus software.
- MARKDOWN: A lightweight markup language, used for creating formatted text.

- NUMBERS: Apple Numbers spreadsheet file, used for spreadsheets.
- ODP: OpenDocument Presentation, used for presentations.
- ODS: OpenDocument Spreadsheet, used for tabular data.
- ODT: OpenDocument Text, used for word processing.
- PAGES: Apple Pages document, used in Apple’s word processing software.
- PDB: Palm Database File, used for Palm OS applications.
- PDF: Portable Document Format, used for documents and publishing.
- PML: Palm Markup Language, used for eBooks on Palm devices.
- POTX: Microsoft PowerPoint Template, used for standardized presentations.
- PPSX: Microsoft PowerPoint Slide Show, used for presentation playback.
- PPT: Microsoft PowerPoint Presentation, used for slideshows.
- PPTM: Microsoft PowerPoint Macro-Enabled Presentation, used for slideshows with macros.
- PPTX: Microsoft PowerPoint Open XML Presentation, used for modern presentations.
- RTF: Rich Text Format, used for text documents with formatting.
- TEX: LaTeX source document, used for typesetting.
- TXT: Plain Text file, used for unformatted text.
- WPD: WordPerfect Document, used in Corel WordPerfect software.
